

Nick Wanner

Austin, Texas, United States | nickrwann@gmail.com | (832) 349-0727 | linkedin.com/in/nick-wanner

Summary

Back-end software engineer with 4+ years of R&D experience in microservices, agentic AI, firmware, and IoT. Acquired 5+ patents. Proven ability to identify critical problems, design novel architectures, and deliver results.

Education

B.S. Computer Engineering • Texas A&M University • 3.95 GPA 2021

Experience

Software Engineer II, Dell Technologies – CTO Engineering 2023 – Present

- Agentic Market Analysis Platform
 - Co-led redesign of RAG tool into scalable agentic service, cutting analyst workload 50% and saving \$1.5M/year.
 - Owned central agent architecture, semantic routing, planning loops, and modular plugin framework.
 - Established and managed service deployments within Kubernetes and CI/CD automation.
- Agentic IT Admin Assistant (R&D PoC)
 - Led development of agentic service for automated vulnerability detection and Intune-based patching.
 - Built ledger-backed, multi-agent orchestrator with persistent state and human-in-loop controls.
 - Filed 10+ GenAI patents (contributed to 20+); demoed at Dell Tech World, securing buy-in from 5+ orgs.
- Designed a config-driven Databricks MLOps pipeline template, seamlessly adopted by data scientists; migrated 5 production models, streamlining deployment and reducing setup time by 30%.
- Developed a config-driven model optimization service using ONNX Runtime and Hugging Face, increasing model inference speed by 15% and halving storage needs on client devices.

Software Engineer, Dell Technologies – Innovation Studio 2021 – 2023

- Designed state-machine and networking logic for Dell's Wi-Fi gaming controller, enabling key UX features; secured 2 patents and contributed to CES award recognition.
- Built a configuration-driven automation framework that allows 24/7 telemetry data collection for novel AI model training; accelerated training data capture by 300% and reduced setup complexity by 75%.
- Delivered Bluetooth pairing PoC automating secure device recognition, enabling instant pre-pairing at checkout, and reducing user interaction time by 90%.
- Developed PoC for interference avoidance in wireless dock mesh networks, enabling decentralized self-organizing bandwidth optimization in crowded spaces; earned 2 patents.

Software Engineering Intern, Dell Technologies – Tech Strategy Team 2020

- Led PoC for a Collaboration Touchpad with HID conferencing controls, aligning HW, FW, and UX teams. Drove Zoom/Teams integration, earned a patent, and cut time to market by 50%; now in production on Dell systems.

Data Science Intern, ThoughtTrace (AI contract analytics startup) 2018

- Developed a real-time service to automate SME QA labeling, replacing manual workflows with a centralized pipeline. Increased iteration speed by 100% and improved model accuracy by up to 8%.

Skills

Languages: Python, C/C++, C#, JavaScript, SQL, NoSQL

Cloud & DevOps: Azure, Kubernetes, Docker, Git, CI/CD

Data & AI: Databricks, Spark, Hugging Face, ONNX, LangGraph (LCEL), PGVector

Distributed Systems: Event Hub, OpenTelemetry, Prometheus, Grafana

Practices: System Design, Design Patterns, Agile/Scrum, Code Review, Cross-functional Leadership
